Leading Economic Index Drops Due to Sharp Decline in Permits; Current Economic Index also Down Slightly Due to Slowing Retail Sales

in this issue economic indicators 10 '04 employment index data

The Gwinnett County Index of Leading Economic Indicators declined sharply in November, as four of the five leading indicators deteriorated during the month. The largest shock to the index was a 39 percent drop in the number of single-family building permits (seasonally adjusted). However, even with the decline the index, it was still slightly above where it was a year ago. The leading index, which is designed to forecast the county's economic performance 3 to 6 months in advance, has been above the 12-month moving average for nine of the last twelve months. This is significant because if the

index is consistently above this average the economy is likely to enter (or continue) a period of economic expansion (Figure 1).

As mentioned, four of the five leading indicators declined in November. However, with the exception of single-family building permits, the declines were small. Single-family permits did decline sharply in November, but it is likely that this is a one-month anomaly and we expect permits in December to increase significantly. Even with the sharp decline, year-to-date through November, single-family permits

Leading Index Components:

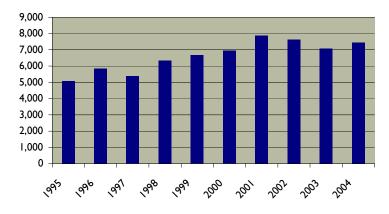

Initial Unemployment Claims	Down	↓	-7.5%
Gwinnett Stock Index	Down	↓	-2.1%
Consumer Expectations	Down	↓	-7.5%
Manufacturing Weekly Hours	Down	¥	-2.6%
Single Family Building Permits	Down	↓	-39.2%
Leading Economic Index	Down	↓	-1.4%

were up more than 5 percent and when the December numbers are recorded, permits will show a significant increase over last year (Figure 2).

Single Family Residential Building Permits

(Year-to-Date Through November)

Current Economic Indicators

The Gwinnett County Index of Current Economic Indicators dropped 0.2 percent in October to 123.95. The drop was primarily due to sharp decline in sales tax collections. Adjusted for inflation and seasonal variation sales tax collections dropped nearly 17 percent from September. The index, which is designed to track the current state of the Gwinnett County economy, was above the 12-month moving average for the 19th consecutive month, and was 2.0 percent above where it was a year ago. This is significant because if the index is consistently above this average, then the economy is likely experiencing a period of growth (Figure 3).

On a seasonally adjusted basis, sales tax revenue was down 15.6 percent from September, and down 7.3 percent from the same month a year ago. This was the first year-over-year decline since November 2003. Interestingly, the year-over-year growth rate had been steadily declining since April. However, even with

these declines, on a year-to-date basis, revenue is up 10 percent (Figure 4).

Figure 3: Gwinnett County Current Economic Index (1997 = 100)

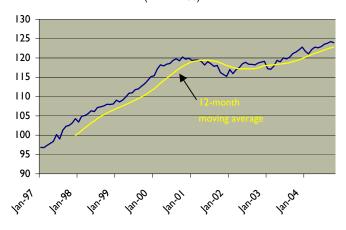

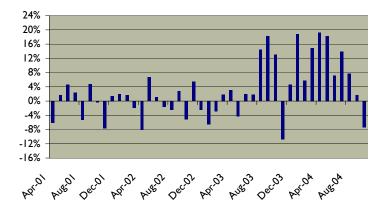

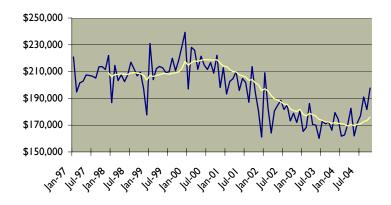

Figure 4: Gwinnett County Sales Tax Revenues
Year-to-Year Percent Change
(Seasonally Adjusted; Constant Dollars)

As was mentioned last quarter, the tourism sector in Gwinnett is beginning to improve as evidenced by the fact that hotel/motel tax receipts (adjusted for inflation and seasonal variation) in October were 18.9 percent above the same month last year, and posted the highest level since January 2002. In addition, the latest employment data for the "Accommodation and Food Service" industry shows 6 percent employment growth earlier in the year (Figure 5 and page 4).

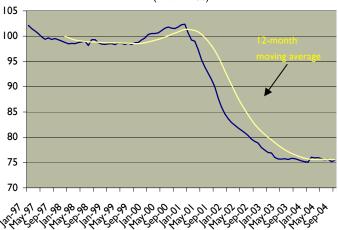

Figure 5: Gwinnett Hotel/Motel Tax Revenues (Tax Rate Adjusted; Seasonally Adjusted; Constant 1982-84 \$'s)

Lagging Economic Indicators

The Gwinnett County Index of Lagging Economic Indicators declined 0.5 percent in September to 75.41. The index, which is designed to confirm turns in the Gwinnett County economy, has been above the 12-month moving average for only 5 of the previous 45 months. This is significant because even if the other economic indices have turned positive, the lagging index confirms that the economy is into recovery. Unfortunately, the index is actually 0.5 percent below where it was a year ago (Figure 6).

Figure 6: Gwinnett County Lagging Economic Index (1997 = 100)

Employment Data - 1st Quarter 2004

The Georgia Department of Labor has released employment data for the first quarter of 2004. During the quarter, Gwinnett County employment grew 1.7 percent adding nearly 5,000 jobs. However, two-thirds of those jobs were in local government sectors. The retail sector lost more than 1,700 jobs coming off the holiday season, and manufacturing added only 183 jobs during the quarter.

When compared to the same quarter a year ago, employment in Gwinnett is up 5.4 percent, or nearly 15,500 jobs. Again, however, most of that growth can be contributed to "population related" sectors that have relatively lower wages than manufacturing, which lost 300 jobs during the same period. Examples of sectors that added significant employment over the 12-months include local government, health care, hospitality (accommodation and food services), and "support services" which includes a broad range of services such as employment agencies, call centers, travel agencies, landscaping, and waste collection.

While the 5.4 percent overall employment growth is the highest annual growth rate the county has experienced since 2000, the type of jobs represented in that number don't begin to offset the significant income that was lost as a result of the nearly 8,000 manufacturing jobs that have left the county since 2001.
