INTRODUCTION

The improper use, storage or disposal of herbicides can cause environmental damage and threaten water supplies by contaminating waterways and potentially harming people and wildlife. This Herbicide Use Plan (hereafter “plan”) forms a part of Gwinnett County’s Comprehensive Storm Water Management Program and has been developed and will be implemented in order to secure compliance with the county’s National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) permit. It is anticipated that the implementation of this plan will assist the county in preventing to the maximum extent practicable any potential water quality degradation that may be caused by the county’s use of herbicides.

The Department of Water Resources, Stormwater Management Division accepts responsibility on behalf of Gwinnett County for the development and maintenance of this plan, however implementation actions will be the responsibility of those individual departments who use herbicides. All county departments should be aware that the NPDES MS4 permit which requires the development and implementation of this plan is a requirement upon Gwinnett County as a governmental entity and not exclusively upon any one department.

For the purposes of this plan an herbicide shall be defined as any pesticide used to kill, limit or regulate the growth of any plant material. Practically this will include but not be limited to such common products as RoundUp, Weed and Feed, broadleaf weed killers and other similar products.

Section 1. HERBICIDE INVENTORY

(1) An inventory of herbicides used by Gwinnett County departments, including specific uses and estimated quantities used, is included in Appendix 1 to this plan. The following Gwinnett County departments use herbicides routinely:
   a) Department of Water Resources;
   b) Parks and Recreation Department;
   c) Department of Support Service; and
   d) Department of Transportation (hereafter “departments”.)

(2) Departments will notify the Department of Water Resources, Stormwater Management Division within 7 days of any significant (> 50% increase or decrease in volumes of herbicide to be used or stored) changes to the inventory as described in Appendix 1. Insignificant (< 50% increase or decrease) changes may be reported on an annual basis during the annual review of the plan.

(3) During the second quarter of each calendar year the Stormwater Management Division will facilitate a review and update of the herbicide inventory and content of the herbicide use plan for the purpose of incorporating any necessary changes,
however it will be the responsibility of each department to ensure that the inventory within Appendix 1 is kept current by notifying Stormwater Management Division of any changes.

(4) Restricted Use Herbicides are noted within the inventory.

Section 2. MATERIAL SAFETY DATA SHEETS (MSDSs) & PRODUCT LABELS

(1) MSDSs and/or product labels for all herbicides used by Gwinnett County will be collated and attached within Appendix 2 of this plan. Where the MSDS or product label does not provide information about the formulation of the products, information on how to recognize the chemical constituents, and/or directions and precautions for applicators, such information will also be made available as an attachment to the relevant MSDS or product label contained within Appendix 2. The MSDS information included in Appendix 2 is additional to and is not intended to replace any obligations individual departments may have to display or make available MSDSs to affected employees.

(2) Departments will provide the Department of Water Resources, Stormwater Management Division with a copy of the MSDS, product label, and if necessary additional information mentioned in sub-section (1) above, for each product used by their department and which is listed within the inventory attached within Appendix 1.

(3) If a relevant MSDS or product label is updated or changed, it shall be the responsibility of the department who is using that herbicide to notify the Department of Water Resources, Stormwater Management Division of the change and provide a copy of the updated document so that the plan may be updated.

Section 3. HERBICIDE USE AND EQUIPMENT MAINTENANCE

Best Management Practices

The misuse of herbicides has the potential to add pollutants to our waterways. The following Best Management Practices (BMPs) relating to the application, storage, handling, management and disposal of herbicides will be implemented in an attempt to minimize the discharge of herbicides to the County’s MS4 and prevent water pollution to the maximum extent practicable.

3.1 Storage

(1) All county employees who use herbicides will follow all product label directions and precautions.

(2) Undiluted herbicides or herbicide concentrates will only be stored in their original containers and must have their labels intact. Damaged labels will be replaced.

(3) Herbicides which have been diluted and are ready for use are not required to be labeled if they are used immediately by one person. Prepared herbicides must be labeled if used by more than one person and/or if they are to be used for more than one day or one shift. Photocopies of the original label with the word
“prepared” marked on the label are considered appropriate. Damaged labels must be replaced.

(4) Prevent the need for storing and labeling prepared herbicide by only making up as much of the product as can be used within one day or shift.

(5) All herbicides are to be stored on an impervious surface within a contained and covered area to prevent water pollution associated with leaks and spills. An adequate storage area will:
   i. be capable of effectively containing 110% of the volume of the largest single herbicide container stored within the area; and
   ii. effectively prevent the ingress of rainfall and stormwater surface runoff into the storage area. See Gwinnett County Water Quality Guideline: WQ3 Secondary Containment Design and Operation Standards for more information. A copy is attached in Appendix 7.

3.2 Handling
(1) Product label directions and precautions will be followed by all county employees to ensure proper use.

(2) Bulk (> 5 gallons of finished product) mixing and decanting of herbicide will be completed in a contained and covered area. Mixing and decanting of small amounts (less than 5 gallons of product in its final diluted form) of herbicide may be completed within a grassy area at least 50 feet away from any water body or impervious surface.

(3) In an effort to minimize spills, closed handling systems will be used to transfer herbicides directly from a storage container to application equipment (through a hose, or funnel for example).

(4) Where possible, rinsate collected during previous equipment cleaning should be used in mixing batches of the same product.

(5) To protect against backflow, an air gap of at least 6 inches will be left between a potable water supply hose and the top of the application equipment tank. A potable water supply hose must never be submerged directly into any reservoir containing herbicide.

(6) Filling of application equipment reservoirs must be actively supervised at all times.

3.3 Application
(1) Product label procedures, instructions, directions and precautions will be followed to ensure proper application of the product.

(2) All local, state and federal regulations regarding herbicide application procedures will be followed.

(3) Application equipment will be checked carefully prior to use in an effort to identify leaking hoses or connections and obstructed or worn nozzles.

(4) Spray equipment will be calibrated as necessary to achieve required distribution and application rates.

(5) Herbicides will never be applied when rain is expected, during a rain event, or during windy conditions.
(6) Appropriate application methods will be used to avoid excessive application of herbicides. See label for appropriate application methods.

(7) Herbicides will only be used when absolutely necessary and their use will be limited wherever possible. Use of native and appropriate vegetation or other physical (rather than chemical) controls will be used when reasonable and practicable.

(8) Records of the application of restricted use herbicides (RUH) will be maintained by departments as is required by state and federal regulations. At a minimum, records should be retained for 2 years.

3.4 Disposal
3.4.1 Herbicide Containers
(1) After a container is emptied and prior to its disposal, empty containers should be triple rinsed to remove all residues from within. The rinsate should then be collected and poured into the appropriate application equipment reservoir. See the Triple Rinsing Procedure in Appendix 6.

(2) After triple rinsing, empty herbicide containers may be properly disposed of with normal municipal trash unless the label indicates otherwise. Disposal should always be completed in accordance with all applicable federal, state and local regulations. See the memo from EPD attached in Appendix 3 for more details on disposal.

(3) Herbicide containers must not be refilled or burned.

(4) Herbicide containers should not be recycled with other general household type recyclables.

(5) Plastic and metal containers should be recycled by approved recyclers whenever possible. USAg Recycling, Inc will collect containers for free upon request. For more information go to www.usagrecycling.com. Only dry, empty, properly rinsed containers are accepted at collection sites. See acceptable containers fact sheet attached in Appendix 6.

3.4.2 Herbicides
(1) Unusable or unwanted herbicides must be disposed of properly. Waste herbicide is likely to be classified as hazardous waste. As such, waste herbicides MUST be handled by a hazardous waste contractor licensed to dispose of herbicides.

(2) The GA Department of Agriculture, Pesticides Division periodically offers free herbicide disposal through its Georgia Clean Day program. For information on the next Georgia Clean Day contact the Pesticide Division of the GA Department of Agriculture: (404) 656-4958. Such herbicides should be stored in accordance with section 3.1 of this plan for disposal at the next Georgia Clean Day.

(3) Waste herbicide must never be disposed of by pouring it into the sanitary sewer or into a storm drain.

(4) Left over herbicide should be stored for later use and MUST not be poured onto the ground, into the sanitary sewer or into a storm drain.
3.4.3 Rinsate
(1) Equipment used in the mixing, storage or application of herbicide must be cleaned in an equipment cleaning wash bay or sink that drains to the sanitary sewer.
(2) Where possible rinsate should be collected and reused by placing it back into the application equipment reservoir.
(3) Equipment rinsing stations should be used and maintained properly to minimize the potential for water pollution associated with these activities.
(4) Equipment rinsing wash bays/sinks must be covered and contained.

3.5 Spill Management
(1) Spills will be attended to immediately to minimize the potential that the spill may cause water pollution.
(2) Spills of dry herbicide will be promptly swept up and reused.
(3) Appropriate absorbent materials will be used to immediately contain and collect liquid herbicide spills.
(4) Any county facility that stores one or more herbicide container(s) larger than 50 gallons in capacity (concentrated or diluted), will develop a written spill response plan. Such a plan should simply address methods to be used in controlling a spill, notification requirements and should be reviewed with relevant employees at least annually.
(5) Educate all employees regarding the potential for water pollution associated with the use of herbicides.
(6) Any spill that exceeds 50 gallons or is of any size and enters into a storm drain or waterway must be reported to Stormwater Management Division immediately. Please call 678-376-7000 (24 hours). Additional reporting under other regulations may also be necessary.

Section 4. INSPECTION AND MONITORING
(1) Mulching, planting of native vegetation and other physical weed control methods will be employed where reasonable and practicable as a method of limiting the use of herbicides.
(2) Areas in public rights-of-way and at facilities that require the application of herbicides will be inspected prior to first application and throughout the application period to ensure that application remains necessary. Herbicides will only be applied on county property when their use is determined to be necessary.

Section 5. LICENSING AND TRAINING PROGRAMS

5.1 Licensing
(1) Gwinnett county employees are only authorized to apply herbicides to county owned or maintained land. County employees, while acting on behalf of the county, will not apply herbicides to private property and will not receive payment for such an application of an herbicide. This is not intended to restrict County
employees who may be using these products as a part of a private business conducted outside of county work hours and not on behalf of the County.

(2) Gwinnett County employees who use general use herbicides for the maintenance of county land are not required but are encouraged to obtain a “Commercial Pesticide Applicators License”. The required knowledge and skills needed to pass the exam for such a license will assist employees in the proper use and handling of general use herbicides.

(3) When “Restricted Use Herbicides” are used for the maintenance of county land, the county employee supervising the handling and application must possess a “Commercial Pesticide Applicators License” and will be responsible for the correct use and application of the herbicide.
   a) A “Commercial Pesticide Applicators License” is required when purchasing any herbicide classified as “Restricted Use.”
   b) All herbicides classified as restricted are clearly marked as “Restricted Use” on the product label and are contained within the inventory attached in Appendix 1.

(4) A list of county employees who hold state pesticide licenses is attached in Appendix 4.

(5) Departments will provide updates on the status of any employees that hold these licenses to the Stormwater Management Division at least annually so that this plan may be kept current.

5.2 Training

(1) All county employees and contractors who use herbicides as part of their daily activities will watch a 10 minute educational video “Protecting Our Waterways: Herbicide Use” in order to understand the basic water quality issues associated with herbicide use.

(2) County employees who use herbicides are encouraged to further their education regarding herbicide licensing requirements, use, handling, storage and disposal by attending the more extensive training classes offered by Gwinnett’s Cooperative Extension Service. Please contact the Extension Service for class availability by calling (678) 377-4010.

(3) Gwinnett County Risk Management Division also offers a training course entitled “Hazard Communication.” This course is designed to teach employees how to read, understand and respond to MSDSs, use Personal Protective Equipment (PPE) and safely handle chemicals. All employees who use herbicides as a part of their work with the county are encouraged to attend this course. A list of employees who have attended this class is attached in Appendix 5.

(4) A log of herbicide use training completed by county employees prior to June 13, 2007 is included in Appendix 5 of this plan.

(5) Departments will provide updates on training completed by their employees to the Stormwater Management Division at least annually so that this plan may be kept current.

SECTION IV – FIRE & EXPLOSION DATA

Flash Point  N/A
Extinguishing Media Water spray, foam, dry chemical, CO2, or any class B extinguishing agent.
Fire Fighting Procedures Fire fighters should use self-contained breathing apparatus and full protective clothing. Thoroughly clean equipment after use.

SECTION V – REACTIVITY DATA

Stability Stable
Conditions to Avoid None
Incompatibility Spray solutions should be mixed, stored, or applied only in stainless steel, aluminum, fiberglass, or plastic containers.
Hazardous Decomposition Products None
Hazardous Polymerization Will not occur.

SECTION VI – HEALTH HAZARD DATA

Carcinogenicity Non-carcinogenic
Toxicity Data Oral LD50 (Rat) = >5,000 mg/kg
Dermal LD50 (Rat) = >5,000 mg/kg
TLV N/A
N.F.P.A. Health: 0, Fire: 0, Reactivity: 0
(Rating: 4-Extreme, 3-High, 2-Moderate, 1-Slight, 0-Insignificant)
Effects of Overexposure Not expected to produce skin sensitization.

SECTION VII – EMERGENCY PROCEDURES

If Swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious or convulsing person.

If on Skin or Clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes.

Inhalation: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.

If in Eyes: Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

Call a poison control center or doctor for treatment advice. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

SECTION VIII – SPILL OR LEAK PROCEDURES

Steps to be taken in case of material leak or spill
For a spill less than one gallon on floor or other impervious surface, soak up with towels or other absorbent material and discard in trash. Clean the spill area with soap and water and rinse the area thoroughly.

Large spills should be contained or diked and then absorbed with attapulgite, bentonite or other absorbent clays. Collect the contaminated absorbent, place in metal drum and dispose of in accordance with waste disposal method.

Waste Disposal Method
Dispose of in accordance with Local, State, and Federal Regulations.

SECTION IX – SPECIAL PROTECTION INFORMATION

Respiratory Protection Avoid breathing vapor or spray mist.
Ventilation No special precautions.
Protective Gloves Rubber gloves
Eye Protection Safety goggles.
Other Long sleeved shirt, pants, shoes and socks.

SECTION X – SPECIAL PRECAUTIONS

Precautions To Be Taken In Handling & Storage
KEEP OUT OF REACH OF CHILDREN. FOLLOW LABEL DIRECTIONS CAREFULLY.

Avoid contact with skin and eyes.

Use agents suitable for type of surrounding fire. Avoid breathing hazardous vapors. Keep upwind. Utilize self-contained breathing apparatus with full-face piece operated in pressure demand or other positive pressure mode.

SECTION 5 - HEALTH INFORMATION

PRIMARY ROUTES OF EXPOSURE AND TARGET ORGANS
Inhalation, eye and skin contact, ingestion

SIGNS AND SYMPTOMS OF EXPOSURE

(1) ACUTE OVEREXPOSURE
May cause eye, skin and mucous membrane irritation.

(2) CHRONIC OVEREXPOSURE
May cause irritation of the mucous membranes. Prolonged contact with skin may cause dermatitis. Eye contact may cause conjunctivitis.

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE
Eye, skin, or respiratory disorders.

CHEMICAL/COMPONENT LISTED AS CARCINOGEN OR POTENTIAL CARCINOGEN
None

NTP | YES ☒ NO | IARC | YES ☒ NO | OSHA | YES ☒ NO

OTHER EXPOSURE LIMITS
Not determined

EMERGENCY AND FIRST AID PROCEDURES

INHALATION: Remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen. Call a physician. INGESTION: Treat symptomatically and supportively. Get medical attention immediately. If vomiting occurs, keep head lower than hips to prevent aspiration. EYE OR SKIN CONTACT: Immediately flush eyes with plenty of water for at least 15 minutes. Call a physician. Flush skin with water. Wash clothing before reuse.

SECTION 6 - REACTIVITY DATA

STABILITY
☐ Unstable ☒ Stable

CONDITIONS TO AVOID
Does not apply

INCOMPATIBILITY (Materials to Avoid)
Galvanized or unlined steel, polyethylene, plastic. May react with metal containers to produce flammable hydrogen gas.

HAZARDOUS DECOMPOSITION PRODUCTS
Thermal decomposition may release toxic oxides of nitrogen, phosphorous and carbon.

HAZARDOUS POLYMERIZATION
☐ May Occur ☒ Will Not occur

CONDITIONS TO AVOID
Does not apply

SECTION 7 - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS LEAKED OR SPILLED
Collect spilled material and place in a labeled, nonmetal or stainless steel container for later reclamation or disposal. Comply with all applicable governmental regulations concerning spill reporting, handling, and disposal of waste.

WASTE DISPOSAL METHOD
Dispose of in accordance with Federal, State, and local regulations.
SECTION 8 - PERSONAL PROTECTION INFORMATION

RESPIRATORY PROTECTION
NIOSH/MSHA approved respirator devices to provide high efficiency protection against particulate matter and organic vapors.

VENTILATION
General or local exhaust to maintain employee exposure below the TLV/PEL.

PROTECTIVE GLOVES
Impervious gloves to prevent skin contact.

EYE PROTECTION
Splash-proof or dust resistant safety goggles to prevent eye contact with this substance. Contact lenses should not be worn.

OTHER PROTECTIVE CLOTHING OR EQUIPMENT
When necessary utilize impervious clothing and other equipment to prevent skin contact with this substance.

SECTION 9 - SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING & STORING
Store in accordance with 40 CFR 165 recommended procedures for the disposal and storage of pesticide containers. Do not store in galvanized or unlined steel spray equipment, as it will react with metal causing a highly combustible gas.

OTHER PRECAUTIONS
Not determined.

SECTION 10 - OTHER INFORMATION

The information contained within was obtained from authoritative sources and is believed to be accurate for the manner in which the product is intended to be used. Other uses could result in ramifications, which are not included within this document.
MATERIAL SAFETY DATA SHEET

Hi-Yield® Super Concentrate KILLZALL Weed & Grass Killer

DATED: 03-14-03

SECTION 1 - CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Name: Voluntary Purchasing Groups, Inc., P. O. Box 460, Bonham, Texas 75418
Emergency Telephone: (903) 583-5501 or (800) 424-9300 (Chemtrec)
For Additional Information Contact: Product Manager or Chemtrec
Common Name (Used on Label): Hi-Yield Super Concentrate KILLZALL Weed & Grass Killer

EPA# 67760-49-7401

SECTION 2 - COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENTS: CAS. Reg. # Approx. % TLV
AU-392-C N/A Mixture Less Than 15% N/A
Glyphosate*** 1071-86-6 41% N/A

***Hazardous chemicals under the criteria of the OSHA Hazard Communication Standard (29 CFR 19.10.1200)

SECTION 3 - PHYSICAL AND CHEMICAL CHARACTERISTICS

BOILING POINT: N/A VAPOR PRESSURE (mm/Hg): N/A
MELTING POINT: N/A VAPOR DENSITY (air=1): N/A
SPECIFIC GRAVITY: 1.17 (Water - 1) REACTIVITY IN WATER: N/A
SOLUBILITY IN WATER: Soluble

APPEARANCE AND ODOR: Amber-colored solution; practically odorless to slight amine-like odor.

SECTION 4 - FIRE AND EXPLOSION DATA

FLASH POINT: >93°C (>200°F) (Pensky Martens closed tester)
FLAMMABLE LIMITS: N/A LEL: N/A UEL: N/A
EXTINGUISHER MEDIA: Water spray, foam, dry chemical, carbon dioxide or any class B extinguishing agent.

SPECIAL FIRE FIGHTING PROCEDURES: Fight fire upwind. Avoid heavy hose streams. Dike area to prevent water runoff. Firefighters and others that may be exposed to vapors, mists, or products of combustion should wear full protective clothing and self-containing breathing apparatus. Equipment should be thoroughly cleaned after use.

SECTION 5 - PHYSICAL HAZARDS (REACTIVITY DATA)

STABILITY: This product is stable for at least 5 years under normal conditions of warehouse storage.

CONDITIONS TO AVOID:

None

INCOMPATIBILITY, MATERIAL TO AVOID:

Do not mix, store or apply this product or spray solutions of this product in galvanized or unlined steel (except stainless steel) containers or spray tanks.

This product or spray solutions of this product react with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture. This gas mixture could flash or explode, causing serious personal injury, if ignited by open flame, spark welder’s torch, lighted cigarettes or other ignition source.

HAZARDOUS DECOMPOSITION PRODUCTS:

None. However, the essential breakdown products are carbon monoxide, carbon dioxide, phosphorus pentoxide and nitrogen oxide.

HAZARDOUS POLYMERIZATION:

Does not occur. This product can react with caustic (basic) materials to liberate heat. This is not a polymerization, but rather a chemical neutralization in an acid base reaction.

CONDITIONS TO AVOID (POLY):

None
SECTION 6 - HEALTH HAZARDS

A. EXPOSURE LIMITS

OSHA Permissible Exposure Limit (PEL): Not Established
Threshold Limit Value (TLV): N/A

B. ROUTE OF ENTRY

Inhalation: Yes Eyes: No
Ingestion: No Skin: Yes

C. HEALTH HAZARD, ACUTE AND CHRONIC:

Eye Contact: May cause pain, redness and tearing based on toxicity studies.
Skin Contact: Is no more than slightly toxic and no more than slightly irritating based on toxicity studies.
Ingestion: Is no more than slightly toxic based on toxicity studies. No significant adverse health effects are expected to develop if only small amounts (less than a mouthful) are swallowed. Ingestion of similar formations has been reported to produce gastrointestinal discomfort with irritation of the mouth, nausea, vomiting and diarrhea. Oral ingestion of large quantities of one similar product has been reported to result in hypotension and lung edema.
Inhalation: Is no more than slightly toxic if inhaled based on toxicity studies.

D. EMERGENCY FIRST AID PROCEDURES:

Eyes: Immediately hold eyelids open and flush with plenty of water for at least 15 minutes. Get medical attention.
If Swallowed: This product will cause gastrointestinal tract irritation. Immediately dilute by swallowing water or milk. Get medical attention.
Inhalation: Remove individual to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.

E. ADDITIONAL INFORMATION:

For additional human emergency first aid or treatment guidance, call 800-424-9300.

SECTION 7 - STORAGE AND DISPOSAL & SPILL/LEAK PROCEDURES

HANDLING: Do not get in eyes or on clothing. Avoid breathing vapor or spray mist. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Spray solutions of the product should be mixed, stored or applied using only stainless steel, aluminum, fiberglass, plastic or plastic-lined containers. Do not mix, store or apply this product or spray solutions of this product in galvanized or unlined steel (except stainless steel) containers or spray tanks. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

STORAGE: Do not contaminate water, foodstuffs, feed or seed by storage or disposal.

DISPOSAL: Wastes resulting from the use of this product that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, State or Local procedures. Emptied container retains vapor and product residue. Observe all labeled safeguards until container is cleaned or destroyed. DO NOT CUT OR WELD ON OR NEAR THIS CONTAINER.

Plastic Containers: Do not reuse container. Triple rinse container. Then puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and Local authorities, by burning. If burned, stay out of smoke.

ACCIDENTAL RELEASE OF MATERIAL & WASTE DISPOSAL METHODS:

Small Spills on the floor or other impervious surface, should be soaked up with towels or other absorbent material and discard in the trash. Clean the spill area with soap and water and rinse the area thoroughly.
Large Liquid Spills on the floor or other impervious surface should be contained or diked and absorbed with attapulgite, benionite or other absorbent clays. Collect the contaminated absorbent, place in a metal drum and dispose of in accordance with applicable Federal, State or Local procedures. Thoroughly scrub floor or other impervious surface with a strong industrial detergent and rinse with water.

SECTION 8 - SPECIAL PROTECTION/CONTROL MEASURES

VENTILATION: No special precautions are recommended.
SPECIAL VENTILATION: N/A
EYE PROTECTION: Wear chemical splash goggles during mixing/pouring operations or other activities in which eye contact with the undiluted solution is likely to occur.

SKIN PROTECTION: Wear appropriate protective clothing to prevent skin contact. Applicators and other handlers must wear long-sleeved shirt, long pants, shoes plus socks and protective eyewear. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

SECTION 9 - ENVIRONMENTAL EFFECTS DATA
This product has been shown to be slightly to moderately toxic in aquatic studies and has been shown to be practically non-toxic to avian species following subacute dietary exposure.

SECTION 10 - TRANSPORTATION DATA

Trade secret composition

OSHA Status
This product is hazardous according to the OSHA Hazard Communication Standard, 29 CFR 1910.1200

3. HAZARDS IDENTIFICATION

Emergency overview
Appearance and odour (colour/form/odour): Liquid / Slight

WARNING!
Keep out of reach of children.
CAUSES SUBSTANTIAL BUT TEMPORARY EYE INJURY
HARMFUL IF SWALLOWED
HARMFUL IF INHALED
REFORMULATION IS PROHIBITED
SEE INDIVIDUAL CONTAINER LABEL FOR REPACKAGING LIMITATIONS
Potential health effects
Likely routes of exposure
Skin contact, eye contact
Eye contact, short term
Causes temporary eye irritation.
Skin contact, short term
Not expected to produce significant adverse effects when recommended use instructions are followed.
Inhalation, short term
Not expected to produce significant adverse effects when recommended use instructions are followed.

Refer to section 11 for toxicological and section 12 for environmental information.

4. FIRST AID MEASURES

Eye contact
Immediately flush with plenty of water.
Continue for at least 15 minutes.
If easy to do, remove contact lenses.
If there are persistent symptoms, obtain medical advice.

Skin contact
Wash affected skin with plenty of water
Wash clothes before re-use.
Take off contaminated clothing, wristwatch, jewellery.

Inhalation
Remove to fresh air.

Ingestion
Immediately offer water to drink.
Do NOT induce vomiting unless directed by medical personnel.
If symptoms occur, get medical attention.

Advice to doctors
This product is not an inhibitor of cholinesterase.

Antidote
Treatment with atropine and oximes is not indicated.

5. FIRE FIGHTING MEASURES

Flash point
Does not flash

Extinguishing media
Recommended: Water, dry chemical, carbon dioxide (CO2), foam

Unusual fire and explosion hazards
None
Environmental precautions: see section 6

Hazardous products of combustion
Carbon monoxide (CO), nitrogen oxides (NOx), phosphorus oxides (PnOy)

Fire fighting equipment
Self-contained breathing apparatus.
Equipment should be thoroughly decontaminated after use.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Use personal protection recommended in section 8.

Environmental precautions
SMALL QUANTITIES:
Low environmental hazard.
LARGE QUANTITIES:
Minimize spread.
Keep out of drains, sewers, ditches and water ways.

Methods for cleaning up
SMALL QUANTITIES:
Flush spill area with water.
LARGE QUANTITIES:
Absorb in earth, sand or absorbent material
Dig up heavily contaminated soil.
Collect in containers for disposal
Refer to section 7 for types of containers.
Flush residues with small quantities of water.
Minimize use of water to prevent environmental contamination.

Refer to section 13 for disposal of spilled material

7. HANDLING AND STORAGE

Handling
Good industrial practice in housekeeping and personal hygiene should be followed
Avoid contact with skin and eyes
When using do not eat, drink or smoke.
Wash hands thoroughly after handling or contact.
Thoroughly clean equipment after use.
Emptied containers retain vapour and product residue.
Observe all labelled safeguards until container is cleaned, reconditioned or destroyed.
Emptied containers retain vapour and product residue.
FOLLOW LABELED WARNINGS EVEN AFTER CONTAINER IS EMTIED.

Storage
Compatible materials for storage: stainless steel, aluminium, plastic, fibreglass, glass lining
Incompatible materials for storage: galvanised steel, unlined mild steel, see section 10
Keep out of reach of children.
Keep away from food, drink and animal feed.
Keep only in the original container
Partial crystallization may occur on prolonged storage below the minimum storage temperature.
If frozen, place in warm room and shake frequently to put back into solution.
Minimum shelf life: 5 years.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Airborne exposure limits

<table>
<thead>
<tr>
<th>Components</th>
<th>Exposure Guidelines</th>
</tr>

<tbody>
<tr>
<td>Isopropylamine salt of glyphosate</td>
<td>No specific occupational exposure limit has been established.</td>
</tr>
</tbody>
</table>
Surfactant | No specific occupational exposure limit has been established.
Water | No specific occupational exposure limit has been established.

**Engineering controls**
Have eye wash facilities immediately available at locations where eye contact can occur.

**Eye protection**
If there is potential for contact:
Wear chemical goggles.

**Skin protection**
If repeated or prolonged contact:
Wear chemical resistant gloves.

**Respiratory protection**
No special requirement when used as recommended.

When recommended, consult manufacturer of personal protective equipment for the appropriate type of equipment for a given application.

### 9. PHYSICAL AND CHEMICAL PROPERTIES

These physical data are typical values based on material tested but may vary from sample to sample. Typical values should not be construed as a guaranteed analysis of any specific lot or as specifications for the product.

### 10. STABILITY AND REACTIVITY

**Stability**
Stable under normal conditions of handling and storage.

**Hazardous decomposition**
Thermal decomposition: No data
Hazardous products of combustion: see section 5

**Materials to avoid/Reactivity**
Reacts with bases to liberate heat.
Reacts with galvanized steel or unlined mild steel to produce hydrogen, a highly flammable gas that could explode.

**Hazardous polymerization**
Does not occur.

### 11. TOXICOLOGICAL INFORMATION

This section is intended for use by toxicologists and other health professionals.

Data obtained on product or on similar products are summarized below. Data obtained on active ingredient are summarized below.
Acute oral toxicity
Rat, LD50 (limit test): > 5,000 mg/kg body weight
Other effects: breathing difficulty, decreased activity, soft stools
Practically non-toxic.
FIFRA category IV
No mortality.

Acute dermal toxicity
Rat, LD50 (limit test): > 5,000 mg/kg body weight
Target organs/systems: None.
Other effects: None.
Practically non-toxic.
FIFRA category IV.
No mortality.

Acute inhalation toxicity
Rat, LC50, 4 hours, aerosol: 2.6 mg/L
Target organs/systems: None.
Other effects: breathing difficulty, decreased activity, local effects
Practically non-toxic.
FIFRA category IV.

Skin irritation
Rabbit, 6 animals, OECD 404 test:
Days to heal: 1
Primary Irritation Index (PII): 0.4/8.0
Other effects: None.
Essentially non-irritating.
FIFRA category IV.

Eye irritation
Rabbit, 6 animals, OECD 405 test:
Days to heal: 10
Moderate irritation
FIFRA category II.

Skin sensitization
Guinea pig, Buehler test:
Positive incidence: 0 %

EXPERIENCE WITH HUMAN EXPOSURE
Ingestion, short term, case report(s):
Gastro-intestinal effects: irritation, nausea/vomiting, diarrhea

Ingestion, short term:
Respiratory effects: increased fluid in lungs (lung/pulmonary oedema)
Cardiovascular effects: decreased blood pressure (hypotension)

Similar formulation

Acute oral toxicity
Rat, LD50: 5,000 mg/kg body weight
Slightly toxic.
FIFRA category III.

Acute dermal toxicity
Rabbit, LD50 (limit test): > 5,000 mg/kg body weight
Practically non-toxic.
FIFRA category IV.
No mortality.

Skin irritation
Rabbit, 6 animals, OECD 404 test:
Days to heal: 3
Primary Irritation Index (PII): 10/0/8.0
Slight irritation
FIFRA category IV

**Eye irritation**
- **Rabbit, 6 animals, OECD 405 test:**
  - Days to heal: > 21
  - Other effects: pannus, tissue destruction in eye (necrosis of conjunctivae)
  - Severe irritation.
  - FIFRA category I

**Acute inhalation toxicity**
- **Rat, LC50, 4 hours, aerosol:** 3.28 mg/L
  - Practically non-toxic.
  - FIFRA category IV.

**Skin sensitization**
- **Guinea pig, 9-induction Buehler test:**
  - Positive incidence: 0 %

**EXPERIENCE WITH HUMAN EXPOSURE**
- **Ingestion, excessive, intentional misuse:**
  - **Respiratory effects:** pneumonitis (aspiration)
  - **Gastro-intestinal effects:** nausea/vomiting, diarrhoea, abdominal pain, bloody vomiting (haematemesis)
  - **Cardiovascular effects:** abnormal heart rhythm (cardiac dysrhythmia), decreased heart output (myocardial depression)
  - **General/systemic effects:** disturbances of fluid and electrolyte regulation, abnormally decreased blood volume (hypovolaemia), elevated serum amylase, fluid loss (haemoconcentration), no cholinesterase inhibition
  - **Laboratory effects - blood chemistry:** elevated serum transaminases, mild acidosis

**Eye contact, short term, epidemiological:**
- **Note:** No cases of irreversible eye effects could be attributed to glyphosate formulations in an extensive epidemiological survey of reported accidental eye contact with these formulations

**N-(phosphonomethyl)glycine; {glyphosate}**

**Mutagenicity**
- **In vitro and in vivo mutagenicity test(s):** Not mutagenic

**Repeated dose toxicity**
- **Rabbit, dermal, 21 days:**
  - NOAEL toxicity: > 5,000 mg/kg body weight/day
  - Target organs/systems: None.
  - Other effects: None.

- **Rat, oral, 3 months:**
  - NOAEL toxicity: > 20,000 mg/kg diet
  - Target organs/systems: None.
  - Other effects: None.

**Carcinogenicity**
- **Mouse, oral, 24 months:**
  - NOEL tumour: > 30,000 mg/kg diet
  - NOAEL toxicity: ~ 5,000 mg/kg diet
  - Tumours: None.
  - Target organs/systems: liver
  - Other effects: decrease of body weight gain, histopathologic effects

- **Rat, oral, 24 months:**
  - NOEL tumour: > 20,000 mg/kg diet
  - NOAEL toxicity: ~ 8,000 mg/kg diet
  - Tumours: None.
  - Target organs/systems: eyes
  - Other effects: decrease of body weight gain, histopathologic effects

**Toxicity to reproduction/fertility**
Rat, oral, 3 generations:
NOAEL toxicity: > 30 mg/kg body weight
NOAEL reproduction: > 30 mg/kg body weight
Target organs/systems in parents: None
Other effects in parents: None
Target organs/systems in pups: None
Other effects in pups: None

Developmental toxicity/teratogenicity
Rat, oral, 6 - 19 days of gestation:
NOAEL toxicity: 1,000 mg/kg body weight
NOAEL development: 1,000 mg/kg body weight
Other effects in mother animal: decrease of body weight gain, decrease of survival
Developmental effects: weight loss, post-implantation loss, delayed ossification
Effects on offspring only observed with maternal toxicity

Rabbit, oral, 6 - 27 days of gestation:
NOAEL toxicity: 175 mg/kg body weight
NOAEL development: 175 mg/kg body weight
Target organs/systems in mother animal: None
Other effects in mother animal: decrease of survival
Developmental effects: None

12. ECOLOGICAL INFORMATION

This section is intended for use by ecotoxicologists and other environmental specialists.

Monsanto has not conducted environmental studies on this product. Data obtained on similar products are summarized below.

Similar formulation

Aquatic toxicity, fish
Bluegill sunfish (Lepomis macrochirus):
Acute toxicity, 96 hours, flowthrough, LC50: 5.8 mg/L
moderately toxic
Rainbow trout (Onchorhynchus mykiss):
Acute toxicity, 96 hours, flowthrough, LC50: 8.2 mg/L
moderately toxic

Aquatic toxicity, invertebrates
Water flea (Daphnia magna):
Acute toxicity, 48 hours, static, EC50: 12.9 mg/L
slightly toxic

Aquatic toxicity, algae/aquatic plants
Green algae (Selenastrum capricornutum):
Acute toxicity, 96 hours, static, EC50: 2.6 mg/L
moderately toxic

Avian toxicity
Bobwhite quail (Colinus virginianus):
Dietary toxicity, 5 days, LC50: > 5,620 mg/kg diet
practically non-toxic
Mallard duck (Anas platyrhynchos):
Dietary toxicity, 5 days, LC50: > 5,620 mg/kg diet
practically non-toxic

Arthropod toxicity
Honey bee (Apis mellifera):
Oral/contact, 48 hours, LD50: > 100 μg/bee
practically non-toxic
Soil organism toxicity, invertebrates
Earthworm (Eisenia fetida):
- Acute toxicity, 14 days, LC50: > 5,000 mg/kg dry soil
- Practically non-toxic

N-(phosphonomethyl)glycine; [glyphosate]

Bioaccumulation
Bluegill sunfish (Lepomis macrochirus):
- Whole fish: BCF: < 1
- No significant bioaccumulation is expected

Dissipation
Soil, field:
- Half life: 2 - 174 days
- Koc: 884 - 60,000 L/kg
- Binds strongly to soil.
Water, aerobic:
- Half life: < 7 days

Identical product without green dye

Biodegradation
Zahn-Wellens test:
- Degradation: 80% within 28 days
- Inherently biodegradable.

13. DISPOSAL CONSIDERATIONS

Product
- Dispose of as hazardous industrial waste.
- Recycle if appropriate facilities/equipment available
- Burn in special, controlled high temperature incinerator.
- Keep out of drains, sewers, ditches and water ways.
- Follow all local/regional/national regulations.

Container
- Triple rinse empty containers
- Pour rinse water into spray tank.
- Store for collection by approved waste disposal service.
- Dispose of as hazardous industrial waste
- Do NOT re-use containers.
- Follow all local/regional/national regulations.

14. TRANSPORT INFORMATION

The data provided in this section is for information only. Please apply the appropriate regulations to properly classify your shipment for transportation.

Not hazardous under the applicable DOT, ICAO/IATA, IMO, TDG and Mexican regulations.

15. REGULATORY INFORMATION

TSCA Inventory
- All components are on the US EPA’s TSCA Inventory

SARA Title III Rules
Section 311/312 Hazard Categories
Immediate
Section 302 Extremely Hazardous Substances
Not applicable.
Section 313 Toxic Chemical(s)
Not applicable.

CERCLA Reportable Quantity
Not applicable.

16. OTHER INFORMATION

The information given here is not necessarily exhaustive but is representative of relevant, reliable data.

For more information refer to product label.
Please consult Monsanto if further information is needed.
Follow all local/regional/national regulations.
In this document the British spelling was applied.
All trademarks herein are trademarks of Monsanto Company or its subsidiaries.

Full denomination of most frequently used acronyms BCF (Bioconcentration Factor), BOD (Biochemical Oxygen Demand), COD (Chemical Oxygen Demand), EC50 (50% effect concentration), ED50 (50% effect dose), IM (intramuscular), IP (intraperitoneal), IV (intravenous), Koc (Soil adsorption coefficient), LC50 (50% lethality concentration), LD50 (50% lethality dose), LDL0 (Lower limit of lethal dosage), LEL (Lower Explosion Limit), LOAEC (Lowest Observed Adverse Effect Concentration), LOAEL (Lowest Observed Adverse Effect Level), LOEC (Lowest Observed Effect Concentration), LOEL (Lowest Observed Effect Level), MEL (Maximum Exposure Limit), MTD (Maximum Tolerated Dose), NOAEC (No Observed Adverse Effect Concentration), NOAEL (No Observed Adverse Effect Level), NOEC (No Observed Effect Concentration), NOEL (No Observed Effect Level), OEL (Occupational Exposure Limit), PEL (Permissible Exposure Limit), PII (Primary Irritation Index), Pow (Partition coefficient n-octanol/water), SC (subcutaneous), STEL (Short-Term Exposure Limit), TLV-C (Threshold Limit Value-Ceiling), TLV-TWA (Threshold Limit Value - Time Weighted Average), UEI (Upper Explosion Limit)

This Material Safety Data Sheet (MSDS) serves different purposes than and DOES NOT REPLACE OR MODIFY THE EPA-APPROVED PRODUCT LABELING (attached to and accompanying the product container). This MSDS provides important health, safety, and environmental information for employers, employees, emergency responders and others handling large quantities of the product in activities generally other than product use, while the labeling provides that information specifically for product use in the ordinary course. Use, storage and disposal of pesticide products are regulated by the EPA under the authority of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) through the product labeling, and all necessary and appropriate precautionary, use, storage, and disposal information is set forth on that labeling. It is a violation of federal law to use a pesticide product in any manner not prescribed on the EPA-approved label.

Although the information and recommendations set forth herein (hereinafter "Information") are presented in good faith and believed to be correct as of the date hereof, MONSENTO Company makes no representations as to the completeness or accuracy thereof. Information is supplied upon the condition that the persons receiving same will make their own determination as to its suitability for the purposes prior to use. In no event will MONSENTO Company be responsible for damages of any nature whatsoever resulting from the use of or reliance upon information. NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR OF ANY OTHER NATURE ARE MADE HEREBUNDER WITH RESPECT TO INFORMATION OR TO THE PRODUCT TO WHICH INFORMATION REFERS.

SECTION 3 - PHYSICAL PROPERTIES

BOILING POINT: 212°F

MELTING POINT: N/A

SPECIFIC GRAVITY (H2O = 1): 1.138 – 1.239 @ 25°C (77°F)

VAPOR PRESSURE (mmHg): 23 mmHg @ 25°C

VAPOR DENSITY (AIR=1): 1.178

% SOLUBILITY IN WATER: Miscible in water

% VOLATILE BY WEIGHT: NE

APPEARANCE: Bright orange opaque liquid

ODOR: Slight aromatic odor

EVAPORATION RATE (Butyl Acetate=1) <1

SECTION 4 - FIRE AND EXPLOSION HAZARD DATA

FLASH POINT & METHOD: No Ignition up to 200°F (93.3°C) SCC

FLAMMABLE LIMITS IN AIR - LEL: UEL: Water based product

EXTINGUISHING MEDIA:

Water based product, will not burn

SPECIAL FIRE FIGHTING PROCEDURES: If product is involved in a fire, wear positive-pressure, self-contained breathing apparatus and full protective clothing

UNUSUAL FIRE AND EXPLOSION HAZARDS: If the water in the product has evaporated, the explosion potential of oryzalin as airborne dust is rated as severe. The minimum ignition temperature for a dust cloud is 714 °F (379 °C).

SECTION 5 - REACTIVITY DATA

STABILITY: Stable under normal conditions. If water in the mixture evaporates, however, the resultant mixture should be handled with care.

HAZARDOUS POLYMERIZATION: N/A

HAZARDOUS DECOMPOSITION PRODUCTS: Nitrogen oxides and other toxic gases may be formed if product is involved in a fire.

CONDITIONS & MATERIALS TO AVOID:

NONE

SECTION 6 - PROTECTIVE EQUIPMENT & EXPOSURE CONTROL METHODS

RESPIRATORY PROTECTION:

Atmospheric levels should be maintained below the exposure guidelines. For most conditions, no respiratory protection should be needed; however, if handling at elevated temperatures without sufficient ventilation, use NIOSH approved air-purifying respirator.

VENTILATION LOCAL EXHAUST: ADEQUATE MECHANICAL: ACCEPTABLE SPECIAL: NONE OTHER: NONE

PROTECTIVE GLOVES: Chemical resistant gloves

EYE PROTECTION: Use safety glasses

OTHER PROTECTIVE CLOTHING OR EQUIPMENT:

Long sleeved shirt and long pants; shoes plus socks AVOID SKIN AND EYE CONTACT
SECTION 7 - HEALTH HAZARDS

PRIMARY ROUTES OF ENTRY:

SKIN AND EYES

CARCINOGEN: NONE KNOWN  NTP: N/A  IARC MONOGRAPHS: N/A  OSHA: N/A

INHALATION:
At room temperature, exposure to vapors are minimal due to physical properties.

EYE CONTACT:
May cause slight transient eye irritation. Corneal injury is unlikely.

SKIN CONTACT:
Prolonged exposure may cause some skin irritation.

INGESTION:
Single dose toxicity is low. The oral LD50 for rats is 5000 mg/kg

SECTION 8 - EMERGENCY & FIRST AID PROCEDURES

EYE CONTACT:
IMMEDIATELY FLUSH EYES WITH WATER FOR AT LEAST 15 MINS.

SKIN CONTACT:
Wash off in flowing water or shower.

INHALATION:
Remove to fresh air if effects occur. Consult a physician.

INGESTION:
If swallowed seek medical attention. DO NOT induce vomiting unless directed to do so by medical personnel.

SECTION 9 - SPILL, LEAK & DISPOSAL INFORMATION

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED:
Use absorbent material to contain and clean up small spills. Scoop up and dispose as waste in approved disposal facility. Prevent runoff. DISPOSE OF IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS.

WASTE DISPOSAL METHOD:
DISPOSE OF IN APPROVED WASTE DISPOSAL FACILITY IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REGULATIONS.

SECTION 10 - SHIPPING DATA

DOT SHIPPING NAME:
NONE

SECTION 11 - SPECIAL PRECAUTIONS & OTHER INFORMATION

SPECIAL INSTRUCTIONS:

OTHER INFORMATION/PRECAUTIONS:
Read and follow all label instructions before use. Avoid contaminating water. Do not reuse containers. Open dumping is prohibited.

COMMON ABBREVIATIONS THAT MAY HAVE BEEN USED: N/A = NOT APPLICABLE  N/E = NOT ESTABLISHED

Appendix 3

Herbicide Container Disposal
June 5, 1995

To: Municipal Solid Waste Landfill Owners and Operators

SUBJECT: Handling of Empty Pesticide Containers

The Environmental Protection Division is currently working with the Georgia Department of Agriculture, the Georgia Agribusiness Council, pesticide manufacturers, and Georgia’s farmers to promote the safe recycling and disposal of empty pesticide containers. One concern expressed is the lack of disposal capacity for empty pesticide containers because many landfill owners and operators are reluctant to accept pesticide containers at their landfills.

The purpose of this letter is to clarify the regulatory status of empty pesticide containers and to encourage you to accept them for proper recycling or disposal. The Georgia Department of Agriculture, working together with the United Agriproducts, has been promoting and successfully recycling empty plastic pesticide containers. This project has been extremely successful and recycled over 110,000 pesticide containers last year. We encourage every community to continue their work with the Department of Agriculture in expanding this successful program. However, there are still a large number of pesticide containers which cannot be successfully recycled at this time and, therefore, must be properly disposed of in a permitted landfill or other approved disposal facility. Attached is a list of the more common pesticide containers that are likely to be brought to municipal solid waste landfills in Georgia. If properly emptied, any of these pesticide containers may be legally disposed of in a permitted municipal solid waste landfill. Pesticide containers should be triple rinsed or, in the case of containers with dust or solids, shaken to ensure that all loose contents have been removed. If emptied in the above manner, the container is considered non-hazardous and would present little, if any, hazard when disposed in the landfill.

If you have concerns with disposal of empty pesticide containers, particularly if they are brought to your facility in large quantities, or if you feel the containers have not been properly emptied, please feel free to contact your EPD compliance officer. Obviously, if these containers are not recycled or accepted at properly permitted disposal facilities, it is likely that they will be improperly dumped or disposed of in a manner that could create a threat to human health or the environment. We appreciate your cooperation in working with Georgia’s Agribusiness to properly manage such containers.

Sincerely,

John D. Taylor, Jr., Chief
Land Protection Branch

Appendix 6

Procedures
Triple Rinsing Procedure

1. Empty contents of container into spray tank, turning the container so that any product trapped in the handle is allowed to flow out. Once flow is down to a drip, allow the container to drain for an additional 30 seconds.
2. Immediately begin rinsing procedures or the product may become difficult to remove.
3. Fill the empty container 1/4 full of clean water.
4. Replace the cap on the container. With the container opening facing left, shake the container left to right over a distance of four to six inches. Shake the container about twice per second for 30 seconds.
5. Drain rinse water into spray tank as previously described.
6. Fill the empty container 1/4 full of clean water a second time.
7. Recap the container. With the opening of the container pointed towards the ground, shake the container as described before. Then drain the rinse water into the spray tank.
8. Finally, fill the empty container 1/4 full once more with clean water.
9. Recap the container. With the container in the normal, upright position, shake the container as described before.
10. Pour the rinse water into the spray tank. Carefully rinse and spray residue from the outside of the container.

Source: http://www.usagrecycling.com/rinse.html
Acceptable vs. Unacceptable Containers!

Compare your containers with the ones shown below.

**ACCEPTABLE**
- Thread and lip are clean.
- Stained but acceptable.

**NOT ACCEPTABLE**
- Dried formulation on thread and lip.
- Stained and unacceptable.
To be acceptable for recycling, plastic crop protection products containers must be empty, clean, uncapped, and dry. Follow this checklist to make sure your containers are acceptable, then compare them with the above pictures.

- **EMPTY:** Plastic containers must be empty to be recycled.
- **CLEAN:** Pressure of triple-rinse the container as soon as it is emptied. Container must be cleaned or they will not be accepted into the recycling program.
- **INSPECT:** Immediately after rinsing the container, look inside and make sure that all the formulation has been rinsed out. Also inspect the outside of the container; particularly check that the pour spout, the spout threads, and the container wall surrounding the spout are free of formulation residues that flake, smear, or come off on a glove when touched. We cannot process containers that have dried formulation in or on them.
- **DISCARD CAP:** Caps are usually made of a different kind of plastic and cannot be recycled. Be sure to clean the cap at the time the container is rinsed. Never put a cap back on a cleaned container. Dispose of the cleaned caps as normal solid waste.
- **KEEP CONTAINERS DRY:** Cleaned containers must be kept out of the rain and away from the rain water. Store cleaned containers in a roofed building, an enclosed trailer, or in plastic bags.
- **LABELS:** Please Remove the instruction booklets.
- **STAINS:** Containers that originally held products known to stain plastic are acceptable for recycling if the plastic is stained but otherwise clean.

Appendix 7

Other Guidelines
Section 1. Introduction

According to the EPA, the majority of water pollution in our streams today is directly caused by pollutants that have been dumped or spilled onto the ground and that are then washed from these surfaces into our creeks and streams by rainwater. This pollution is caused by many different sources and activities, each of which may seem insignificant when considered in isolation. However, stormwater runoff, acting as nature’s bath, collects and combines each of these small pollutant sources, which drain into a local stream and causes significant levels of water pollution.

Improper storage of potential pollutants will increase the risk of water pollution that may occur because of spills.

The risk of water pollution associated with the storage of potential pollutants can be minimized through the implementation of the simple water quality best management practices (BMPs) contained within this guideline.

With respect to secondary containment this guideline is intended to provide minimum requirements for compliance with Gwinnett County’s Illicit Discharge and Illegal Connection (IDIC) Ordinance (Chapter 100, Gwinnett County Code of Ordinances). It is expected that individuals and companies involved in storing potential pollutants will fully implement these guidelines and take any additional necessary and reasonable actions, as needed on a case-by-case basis, to prevent stormwater pollution.

1.1 Definitions

For the purposes of this Water Quality Protection Guideline the following terms will be defined as follows:

“Potential pollutants” as used in this guideline refers to any liquid that could reasonably be expected to cause water pollution if it were to enter into a stream or drainage system and would include, but not be limited to; oils, fuels, detergents, pesticides and other chemicals.

“Rainwater waste” in this guideline refers to rainwater that has accumulated within a secondary containment area.

“Polluted rainwater waste” as used in this guideline will refer to rainwater waste that contains a pollutant or pollutants.
“Unpolluted rainwater waste” in this guideline will refer to rainwater waste that does not contain any pollutant or pollutants.

Section 2. Purpose

The purpose of this Water Quality Protection Guideline is to:

(1) provide details of water quality BMPs that may be implemented to assist in controlling pollutants associated with the storage of potential pollutants;
(2) serve as a reference for regulators, inspectors and others who assess the water quality impacts of operations that store these types of materials; and
(3) provide guidance that, if implemented, will assist in securing compliance with Gwinnett County’s Illicit Discharge and Illegal Connection (IDIC) Ordinance.

Section 3. Best Management Practices

3.1 Design Requirements

(1) Secondary Containment shall be designed and constructed to meet the following criteria:
   (a) provide adequate backup storage capacity for stored potential pollutants; and
   (b) provide a barrier between the primary storage container and the environment, thereby reducing the potential for soil, surface water and ground water contamination; and
   (c) provide additional storage capacity for any potential pollutants which may leak or spill due to the failure, overfilling or improper draining of the primary storage container.

(2) These criteria may be achieved through implementation of the following design considerations:
   (a) Structurally, secondary containment may be constructed out of any material that will adequately contain the potential pollutants stored within the contained area. Commonly concrete, concrete block, plastic and steel are used; and
   (b) The secondary container including walls, floors and joints should be constructed of materials that are capable of adequately containing those potential pollutants stored within; and
   (c) Available capacity of the containment area shall be at least 110% of the total volume of the largest primary container. Such volume must take into consideration the volume reduction caused by the containers themselves. See Figure 1; and
   (d) Any provided drainage valves must be liquid tight and able to be locked in the fully closed position.

3.2 Secondary Containment

Rainwater will collect in uncovered secondary containers. Rainwater waste that collects within secondary containment must be removed regularly so that it does not reduce the capacity of
the secondary container to contain potential pollutants that may subsequently be spilled within. However this rainwater waste must initially be treated as if it may be polluted. The best way to handle this rainwater waste stream is to prevent its generation in the first place. This can be accomplished by providing cover to the secondary containment area.

### 3.2.1 Secondary Containment with Cover

(1) Effective cover should consist of a stable and permanent structure that extends beyond the outer wall of the secondary containment a distance greater than or equal to 30% of the height of the cover above the top of the secondary containment wall. For example, where the cover is situated 10 feet above the secondary containment wall it should also extend a minimum of 3 feet in all directions beyond the vertical plane of the secondary containment wall. See Figure 2 attached.

(2) Even with cover provided, rainfall may occasionally still enter into a secondary container. Under these circumstances this rainwater waste must be handled in accordance with the guidelines contained within section 3.2.2 below.

(2) Use of secondary containment without a cover is not recommended. Utilizing uncovered secondary containment will increase the risk of storm water pollution and increase the potential for violations of Gwinnett County’s IDIC Ordinance.

### 3.2.2 Secondary Containment Without Cover

(1) As stated with 3.2.1(3) above secondary containment without cover is not recommended.

(2) In circumstances where rainwater has collected in secondary containment after a rain event, all such rainwater waste must be initially treated as if it were polluted and be properly tested to ascertain whether pollutants do actually exist in the collected rainwater waste.

a. The owner of the secondary containment is deemed the generator of the rainwater waste and is therefore responsible for its storage and disposal.

b. Appropriate testing will depend on the potential pollutant(s) that are stored within the secondary containment area. Examples of appropriate testing could include:

   i. Oil/Petroleum: Visually checking for oil or petroleum sheen on the surface of the water; or

   ii. Liquid chlorine: Use a field test kit to check for the presence of chlorine; or

   iii. Acids/Alkalis: Use a pH test kit to ensure water has a pH of between 6.0 and 8.5; or

   iv. Other: Tests should be quantitative and provide objective and reproducible results.

c. Results of testing should be recorded and kept on file.

d. Any rainwater waste that tests positive for any pollutants (polluted rainwater waste) must not be discharged onto the ground or into a storm drain.
e. Collected rainwater waste that tests negative for relevant pollutants (unpolluted rainwater waste) may be discharged to the ground or to a storm drain.

f. Gwinnett County reserves the right to make a final determination on whether rainwater waste is polluted or not. The generator may be found in violation of the County’s Illicit Discharge and Illegal Connection Ordinance where the county determines that polluted rainwater waste was discharged to a storm drain.

g. To be considered unpolluted rainwater waste, such rainwater waste must not contain any pollutants that may be observed through use of qualitative or quantitative laboratory or field analysis techniques.

(3) Once tested the generator must make a determination on how the rainwater waste should be disposed of. Disposal options consist of onsite or offsite disposal. See section 4.0 below.

(4) Rainwater waste must not remain or be allowed to accumulate in a secondary containment structure for more time than is reasonably necessary after a rainfall event. Allowing rainfall waste to accumulate will reduce the capacity of the structure and therefore limit its effectiveness.

(5) Drainage valves to secondary containment must remain closed and locked at all times when not in use and should only be opened to drain a spill or polluted rainwater waste to a collection tanker or other appropriate container or disposal location, or to allow unpolluted rainwater waste to escape. Only employees familiar with the contents of this guideline should be issued with a key to the lock on the drainage valve.

Section 4. Rainwater Waste Disposal Options

4.1 On-Site Disposal

4.1.1 Disposal to Sanitary Sewer

(1) Disposal of polluted rainwater waste to the sanitary sewer must meet the sanitary sewer discharge standards which are administered by Gwinnett County Department of Public Utilities. Common discharge standards* are as follows:

a. Temperature: Less than 150°F;

b. PH: Between 5.5 and 10.5;

c. Oils and Grease: Less than 200 mg/L;

d. Solids or viscous substances may only be discharged in amounts that will not obstruct sewer flow;

e. Toxic Pollutants identified in Section 307(a) of the Clean Water Act (See appendix A);

f. Lead: 116 ug/L;

g. Copper: 109 ug/L;

h. Total Petroleum Hydrocarbon (TPH): 20 ug/L;

i. Biological Oxygen Demand (BOD₅): 700 (350**) mg/L;

j. Total Suspended Solids (TSS): 700 (350**) mg/L;
*Please note: This is not a complete list. If you have questions about the discharge limits of a specific pollutant please contact the Department of Public Utilities at 678-376-6700.

**Requirement in “No Business Creek”**

k. All discharges to the sanitary sewer must be free of grease, oil, grit or any other material that could possibly clog the sewer. The Department of Public Utilities requires filtering the wash water through a 400 micron filter before discharging. The waste left in the filter may be bagged, dried and placed in a dumpster.

l. Any waste water that may contain oil or grease must be discharged to the sanitary sewer through an oil/water separator.

m. Discharges to the sanitary sewer must not contain pollutants that could create fire or explosion hazard.

n. Waste water must only be discharged to parts of the sanitary sewer that are privately owned. Rainwater waste must not be discharged directly into the publicly owned sanitary sewer system.

o. No more than 50 gallons of rainwater waste of acceptable quality may be discharged to the sanitary sewer within a 24 hour period without the prior approval of Gwinnett County Department of Public Utilities – Water Reclamation Division. Please contact this division at 678-376-7000 for additional information.

### 4.1.2 Disposal to Septic System

1. Most septic systems are only permitted by the Environmental Health section of the Gwinnett County Board of Health to receive bathroom and kitchen type wastewater (domestic wastewater). Additional permits through the Georgia Environmental Protection Division would be needed to discharge non-domestic wastewater to septic systems. Non-domestic wastewater would likely include polluted rainwater waste.

2. Prior to discharging polluted rainwater waste to a septic system, the waste generator must confirm that the discharge is covered by the appropriate EPD permit. Please contact EPD’s Georgia Geologic Survey - Underground Injection Control Coordinator at (404) 656-3214 for more information.

3. Generators must not discharge waste water to septic systems in violation of the terms of the permit.

4. Volumes of rainwater waste otherwise eligible for discharge to a septic system, when combined with waste water from other sources, must not exceed the volume of waste water the system was designed to handle.

### 4.1.3 Disposal to Storm Drain

1. Only rainwater and unpolluted rainwater waste may be discharged to a storm drain.
(2) Discharge to the storm drain of polluted rainwater waste will constitute a violation of the county's Illicit Discharge and Illegal Connection Ordinance and all appropriate penalties may be applied.

(3) Gwinnett County reserves the right to make a final determination on whether rainwater waste is polluted or not. The generator or discharger may be found in violation of the County’s Illicit Discharge and Illegal Connection Ordinance where the county determines that polluted rainwater waste was discharged to a storm drain.

(4) If you have any doubt as to whether your rainwater waste water would meet all of the requirements for discharge to the storm drain it should be collected and disposed of via one of the other methods mentioned in this environmental guideline.

4.2 Off-Site Disposal

(1) If on-site disposal methods cannot be utilized because of the restrictions contained within section 4.1 above, all polluted rainwater waste must be collected and disposed of off-site.

(2) All generated polluted rainwater waste must be collected.

(3) Off-site disposal locations must be permitted to accept and handle the collected polluted rainwater waste.

(4) Polluted rainwater waste must be transported in a manner that ensures that no discharge occurs between the waste generation location and the permitted off-site disposal location.

(5) Records of off-site disposal, including at a minimum the time, date, volume and name of the disposal company, should be kept by the generator.

Section 5. General

(1) It is illegal to dispose of any waste or pollutants into the storm sewer system. Penalties for non-compliance include fines of up to $1,000 and/or 60 days in county jail.

(2) To report a spill or discharge into the storm sewer system contact Gwinnett County's Storm Water Management Division's 24-hour call center at 678-376-7000.

(3) Additional information regarding water quality, storm water programs and storm water best management practice implementation can be obtained by contacting Gwinnett County’s Storm Water Management Division at 678-376-6949 or visiting www.gwinnettsstormwater.com.
Figure 1
Secondary Containment Cover Overhang Detail

Minimum Roof Overhang: \( x \geq 0.3y \)

Where \( x \) = overhang; and
Where \( y \) = distance between roof and top of secondary containment

Example: If \( y = 10 \text{ft} \); then \( 0.3 \times 10 = 3 \text{ft} \).
So, the overhang needs to be at least 3 feet.
Figure 2
Example Calculations for Secondary Containment Storage Capacity

Secondary Containment Storage Capacity Calculations

Step 1. Calculate Required Containment Volume
= 110% of single largest tank
= 6,000 x 1.1
= 6,600 gallons

Step 2. Convert Required Containment Volume to cubic feet
= Required Containment Volume x [0.1337 cu. ft./gal.] conversion factor
= 6,600 gals. x [0.1337 cu. ft./gal.]
= 883 cu. ft.

Assumptions:

\[ \begin{align*}
  x &= 25 \text{ feet} \\
  y &= 15 \text{ feet} \\
  h &= \text{to be calculated}
\end{align*} \]

\[ \begin{align*}
  \text{Volume Tank A} &= 6,000 \text{ gal.} \\
  \text{Radius Tank A} &= 3 \text{ ft.} \\
  \text{Volume Tank B} &= 4,500 \text{ gal.} \\
  \text{Radius Tank B} &= 2.5 \text{ ft.} \\
  \text{Volume Tank C} &= 3,500 \text{ gal.} \\
  \text{Radius Tank C} &= 2 \text{ ft.}
\end{align*} \]
Step 3. Calculate Total Contained Surface Area
   
   \[ \text{Total Contained Surface Area} = (xy) \]
   \[ = 25 \text{ ft.} \times 15 \text{ ft.} \]
   \[ = 375 \text{ sq. ft} \]

Step 4. Calculate Total Cross-Sectional Area of Tanks
   
   \[ \text{Total Cross-Sectional Area of Tanks} = \pi r^2 \]
   \[ = 3.14 \times (\text{radius of tank})^2 \]

   Tank A
   \[ = [3.14 \times (3)^2] \]
   \[ = 28.26 \text{ sq. ft.} \]

   Tank B
   \[ = [3.14 \times (2.5)^2] \]
   \[ = 19.63 \text{ sq. ft.} \]

   Tank C
   \[ = [3.14 \times (2)^2] \]
   \[ = 12.56 \text{ sq. ft.} \]

   \[ \text{Total Cross-Sectional Area of Tanks} = 28.26 + 19.63 + 12.56 \]
   \[ = 61 \text{ sq. ft.} \]

Step 5. Calculate Available Contained Surface Area
   
   \[ \text{Available Contained Surface Area} = (\text{Total Contained Surface Area}) - (\text{Total Cross-Sectional Area of Tanks}) \]
   \[ = (375 \text{ sq. ft.}) - (61 \text{ sq. ft.}) \]
   \[ = 314 \text{ sq. ft.} \]

Therefore, to determine the required height for the containment wall (h):

   \[ \text{Volume}(V) = \text{Length}(x) \times \text{Width}(y) \times \text{Height}(h) \]

   \[ (h) = \frac{V}{xy} \]

So where:

   \[ V = \text{Required Containment Volume (Step 2)} = 883 \text{ cu. ft.} \]
   \[ xy = \text{Available Contained Surface Area (Step 5)} = 314 \text{ sq. ft.} \]

   \[ \text{Height of Containment Wall (h)} = (883 \text{ cu. ft.} / 314 \text{ sq. ft.}) \]
   \[ = 2.81 \text{ ft. (33.75 inches)} \]

In this example, the containment wall must be at least 2.81 feet in height to provide the required containment capacity.
Best Management Practice (BMP)
Water Quality Protection Guideline

Commercial Landscaping and Lawn Care Services

For the purpose of this Water Quality Protection Guideline, Commercial Landscaping and Lawn Care Services are defined as those services offered for a fee and which include the installation, maintenance and/or care of lawns, trees, shrubs, gardens and ancillary hardscapes primarily for aesthetic purposes but which exclude commercial agricultural activities.

Section 1. Introduction

According to the EPA, the majority of water pollution in our streams today is caused by pollutants that have been dumped or spilled onto the ground, and which are then washed from these surfaces by rainwater into our creeks and streams. This pollution is caused by many different sources and activities, each of which may seem insignificant when considered in isolation. However, stormwater runoff, acting as nature’s bath, collects and combines each of these small pollutant sources, which drain into a local stream and cause significant levels of water pollution.

Activities associated with Commercial Landscaping and Lawn Care Services have the potential to contribute pollutants such as sediments, pesticides, fertilizers, and yard waste into our waterways.

Pollution from these activities can be minimized or eliminated through the implementation of the simple water quality best management practices (BMPs) contained within this guideline.

With respect to Commercial Landscaping and Lawn Care Services this guideline is intended to provide minimum requirements for compliance with Gwinnett County’s Illicit Discharge and Illegal Connection (IDIC) Ordinance (Chapter 100, Gwinnett County Code of Ordinances). It is expected that individuals and companies involved in Commercial Landscaping and Lawn Care Services will fully implement these guidelines and take any additional necessary and reasonable actions, as needed on a case-by-case basis, to prevent storm water pollution.

1.1 Definitions

“Pesticide” as used in this guideline refers to any chemical that is used to control pest species and that includes but is not limited to insecticides, herbicides, fungicides, algacides and other similar products.

“Fertilizer” as used in this guideline refers to any substance that contains as an active ingredient, in any form, phosphorus, nitrogen and/or potassium and which is used for the purpose of maintaining or enhancing the growth of vegetation.

“Fuel” as used in this guideline refers to any liquid that could reasonably be expected to cause water pollution if it were to enter into a stream or drainage system and would include but not be limited to both new and used hydraulic oils, motor oils, gasoline, diesel and other similar products.

“Secondary Containment” refers to a risk management measure that provides a secondary container as
backup to a primary container for the purpose of providing adequate volume capacity to contain a spill from the primary container.

**Section 2. Purpose**

The purpose of this Water Quality Protection Guideline is to:

1. provide details of water quality BMPs that may be implemented to assist in controlling pollutants associated with Commercial Landscaping and Lawn Care Services;
2. serve as a reference for regulators, inspectors and others who assess the water quality impacts of Commercial Landscaping and Lawn Care Services; and
3. provide guidance that, if implemented, will assist in securing compliance with Gwinnett County’s Illicit Discharge and Illegal Connection (IDIC) Ordinance.

**Section 3. Best Management Practices**

**3.1. Storage and Maintenance Facilities**

**3.1.1 Storage**

1. All employees who use pesticides and/or fertilizers will follow all product label directions and precautions regarding storage requirements.
2. Pesticides and fertilizers should only be stored in their original containers and must have their labels intact. Damaged labels should be replaced.
3. All pesticides, fertilizers, fuels, and other potential stormwater pollutants are to be stored on an impervious surface within a contained and covered area to prevent water pollution associated with leaks and spills. An adequate storage area will:
   i. be capable of effectively containing 110% of the volume of the largest single container stored within the area; and
   ii. will effectively prevent the ingress of rainfall and stormwater surface runoff into the storage area. See Gwinnett County Water Quality Guideline: WQ3 Secondary Containment Design and Operation Standards for more information.

**3.1.2 Equipment and Vehicle Washing**

1. Wastewater generated during vehicle or equipment cleaning must not be allowed to enter into a street, storm sewer or waterway.
2. The washing of any equipment or vehicles that has the potential to contribute pollutants to stormwater runoff must be performed in an appropriately designed wash bay.
3. Wash bays shall be designed and constructed to meet three basic goals:
   i. collect and contain waste water for appropriate disposal;
   ii. prevent storm water runoff or rainwater from entering the wash bay; and
   iii. prevent the intermingling of storm water with wastewater.
4. Washing of equipment and vehicles without the use of chemicals or detergents to remove grass clippings, dust or pollen may be completed on a grassy area.
(5) Please refer to Gwinnett County Water Quality Guideline WQ6 - Wash Bay Design Standards* and WQ5 - Commercial Car Washing Operations* for more information.

*Gwinnett County Stormwater Management Division is currently developing these Water Quality Guidelines.

3.2 Work Site Management

3.2.1 Chemical Use

3.2.1.1 Handling

(1) Product label directions and precautions must be followed by all employees to ensure proper use.
(2) Bulk (> 5 gallons of finished product) mixing and decanting of pesticides and fertilizers should be completed in a contained and covered area or within a grassy surface at least 50 feet away from any storm drain, impervious surface or water way. Spills should be handled in accordance with Section 3.2.5 of this guideline. Mixing and decanting of small amounts (less than 5 gallons of product in its final diluted form) of pesticides and fertilizers may be completed within a grassy area at least 10 feet away from any storm drain, impervious surface or water body.
(3) In an effort to minimize spills, closed handling systems should be used to transfer pesticides and fertilizers directly from a storage container to the application equipment (through a hose, or funnel for example).
(4) Where possible, rinsate collected during previous equipment cleaning should be used in mixing batches of the same product.
(5) To protect against backflow, an air gap of at least 6 inches must be left between a potable water supply hose and the top of the application equipment tank. A potable water supply hose must never be submerged directly into any reservoir containing a chemical.

3.2.1.2 Application

(1) Product label procedures, directions and precautions must be followed at all times to ensure proper application of the product.
(2) All local, state and federal regulations regarding application procedures must be followed.
(3) Application equipment should be checked carefully prior to use in an effort to identify leaking hoses or connections and obstructed or worn nozzles.
(4) Spray equipment should be calibrated as necessary to achieve required distribution and application rates.
(5) Pesticides and fertilizers must never be applied when rain is expected, during a rain event, or during windy conditions.
(6) Avoid applying pesticides and fertilizers on or near curbs, gutter, driveways, or other impervious surfaces as application onto these surfaces will be washed off during the next rain event and contribute to water pollution.
(7) Spray guards should be used on equipment to reduce off-spray.
(8) Rather than blanketing entire areas, pesticides and fertilizers should be spot applied only where necessary.
3.2.2 Chemical Disposal

3.2.2.1 Pesticide and Fertilizer Containers

(1) After a container is emptied and prior to its disposal, empty containers should be tripled rinsed to remove all residues from within. The rinsate should then be collected and poured into the appropriate application equipment reservoir. Refer to the Triple Rinsing Procedure in Attachment 1.

(2) Holes should be punched into empty containers after triple rinsing to ensure that they are not re-used.

(3) After triple rinsing, empty containers may be properly disposed of with normal municipal trash unless the label indicates otherwise. Disposal should always be completed in accordance with all applicable federal, state and local regulations.

(4) Pesticide and fertilizer containers should not be refilled or burned.

(5) Pesticide and fertilizer containers should not be recycled with other general household type recyclables.

(6) Plastic and metal containers should be recycled by approved recyclers whenever possible. USAg Recycling, Inc. will collect containers for free upon request. For more information go to www.usagrecycling.com. Only dry, empty, properly rinsed containers are accepted at collection sites. See acceptable containers fact sheet attached in Attachment 2.

3.2.2.2 Pesticides and Fertilizers

(1) Unusable or unwanted pesticides and fertilizers must be disposed of properly. Waste pesticides are likely to be classified as hazardous waste. As such, they MUST be handled by a hazardous waste contractor licensed to dispose of pesticides.

(2) The GA Department of Agriculture, Pesticides Division periodically offers free pesticide disposal through its Georgia Clean Day program. For information on the next Georgia Clean Day contact the Pesticide Division of the GA Department of Agriculture: (404) 656-4958. Such pesticides should be stored in accordance with section 3.1.1 of this guideline for disposal at the next Georgia Clean Day.

(3) Waste pesticides and fertilizers must never be disposed of into a dumpster or by pouring onto the ground, into a sanitary sewer or into a storm drain.

3.2.2.3 Rinsate

(1) Equipment used in the mixing, storage or application of pesticides and fertilizers must be cleaned in an equipment cleaning wash bay or sink that drains to the sanitary sewer. Concentrated and prepared pesticides must not be disposed of into the sanitary sewer.

(2) Where possible rinsate should be collected and reused by placing it back into the application equipment reservoir.

(3) Equipment rinsing stations should be used and maintained properly to minimize the potential for water pollution associated with these activities.

(4) Equipment rinsing wash bays/sinks must be covered and contained.
3.2.3 Yard Waste Disposal

(1) Leaves, grass clippings and other yard waste must never be blown, swept or dumped into a storm drain, street, driveway, drainage ditch, waterway, parking lot, or any other conveyance that provides for the collection and movement of stormwater.

(2) Yard waste blown, swept or dumped into any stormwater conveyance constitutes a violation of Gwinnett County’s Illicit Discharge and Illegal Connection Ordinance.

(3) All yard waste should be bagged for disposal at a permitted inert landfill, composted or applied to an area of land where no possibility for entrance into the storm sewer system or a waterway exists.

3.2.4 Concrete Placement and Clean Up

(1) Concrete placement and clean up must be done in a manner that eliminates the possibility of concrete slurry or wash water from entering into a street, storm drain, gutter, drainage ditch or any other conveyance that provides for the collection and movement of stormwater.

(2) Equipment used in concreting should be cleaned in an area that allows for the generated wastewater to soak quickly into the ground. Acceptable cleanup locations would be within a wooded area or pine straw garden bed. Alternatively, dig a hole to receive the waste water and refill with excavated dirt once the water has soaked into the ground. Beware of underground utilities whenever you dig.

(3) Cleanup should be completed at least 50 feet away from a storm drain, waterway or impervious surface.

3.2.5 Spill Management

(1) All spills must be attended to immediately to minimize the potential that the spill may cause water pollution.

(2) Spills of dry chemicals (such as pesticides or fertilizers) should be promptly swept up and reused.

(3) Appropriate absorbent materials should be used to immediately contain and collect liquid spills.

(4) Soil contaminated by spills must be collected and disposed of appropriately. Note: such waste should be assessed to determine whether it should be considered hazardous, and if so should be handled in accordance with all applicable regulations.

(5) Facilities that store any type of stormwater pollutant (i.e. pesticides, herbicides, fuel) in a quantity that exceeds 55 gallons in capacity (concentrated or diluted), should develop a written spill response plan. Such a plan should simply address methods to be used in controlling a spill, notification requirements and should be reviewed with relevant employees at least annually.

(6) All vehicles transporting pesticides or fertilizers should have a spill kit on board at all times.

(7) In the event of a chemical spill onto a roadway, Gwinnett County’s Department of Transportation must be contacted immediately at (770) 822-7400.

(8) Any spill that exceeds 55 gallons or is of any size and enters into a storm drain or waterway must be reported to Stormwater Management Division immediately. Please call 678-376-7000 (24 hours). Additional reporting under other regulations may also be necessary.

(9) All employees should be educated regarding the potential for water pollution associated with the use and storage of lawn care chemicals, fuels and any other substance that could
reasonably be expected to cause water pollution if it were to enter into a stream or drainage system.

3.2.6 Sediment and Erosion Control

(1) Erosion and sediment controls should be employed whenever soil is disturbed during landscaping activities. Guidance on appropriate Sediment and Erosion control Best Management Practices are detailed within the latest version of the Manual for Erosion and Sediment Control in Georgia (The Green Book). You may access a copy of this publication online at www.gaswcc.org/docs.htm. Alternatively please contact the Georgia Soil and Water Conservation Commission at 770-761-3020 to obtain a hard copy.

(2) If the area to be disturbed is greater than one acre or of any size but within within 200 feet of a state water, a land disturbance permit will be required from Gwinnett County’s Department of Planning and Development. In addition the State of Georgia has mandated that persons involved in such work must also receive specific Erosion and Sediment Control training. See www.gaswcc.org for more details.

3.3 Licensing and Training

3.3.1 Material Safety Data Sheets (MSDSs) and Product Labeling

(1) Materials Safety Data Sheets (MSDSs) for all chemicals used or stored must be made available at all times.

(2) All employees must be made aware of any precautions or emergency response procedures indicated on product MSDS.

(3) All storage, application and safety instructions on MSDSs must be precisely followed.

(4) All chemical products must be clearly labeled at all times. No unlabeled chemicals should be stored.

3.3.2 Employee Education

3.3.2.1 Education

(1) All employees should be educated regarding the potential for stormwater pollution associated with the landscaping and lawn care industry.

(2) All employees should be educated about Gwinnett County’s Illicit Discharge and Illegal Connection Ordinance and be aware of penalties associated with a violation of this Ordinance.

(3) All employees should be encouraged to further their education regarding the handling, application and disposal of pesticides and fertilizers to reduce the possibility of water pollution associated with their use. Contact Gwinnett County’s Cooperative Extension Service office at 678-377-4010 to obtain information about available training.

(4) See section 3.2.6(2) above for information on mandated Sediment and Erosion Control training.

3.3.2.2 Pesticide Operator Licensing

(1) In order to provide pesticide applications of any type of pesticide to the property of another, and collect a fee for these services, both a Commercial Applicator License and a Pesticide
Contractor License are required. These licenses are issued and administered by the Georgia Department of Agriculture’s Pesticide Division.

(2) A Pesticide Contractor’s License is required by any business engaged in the activity of contracting for the application of any type of pesticide to the property of another in the state of Georgia.

(3) A Pesticide Contractor’s License requires that each business must maintain at least one certified Commercial Pesticide Applicator in full employment during all periods of operation.

(4) These requirements apply to all types of pesticides (insecticides, herbicides, fungicides, algacides), and include common use pesticides such as “Roundup” and “Weed and Feed.”

(5) For more information regarding licensing requirements for commercial pesticide use contact the Georgia Department of Agriculture’s Pesticide Division at (404) 656-4958.

Section 4. General

(1) It is illegal to dispose of any waste or pollutants into the storm sewer system. Penalties for non-compliance include fines of up to $1,000 and/or 60 days in county jail.

(2) To report a spill or discharge into the storm sewer system contact Gwinnett County’s Storm Water Management Division’s 24-hour call center at 678-376-7000.

(3) Additional information regarding water quality, storm water programs and storm water best management practice implementation can be obtained by contacting Gwinnett County’s Storm Water Management Division at 678-376-6949 or visiting www.gwinnettstormwater.com
Attachment 1

**Triple Rinsing Procedure**

1. Empty contents of container into spray tank, turning the container so that any product trapped in the handle is allowed to flow out. Once flow is down to a drip, allow the container to drain for an additional 30 seconds.

2. Immediately begin rinsing procedures or the product may become difficult to remove.

3. Fill the empty container 1/4 full of clean water.

4. Replace the cap on the container. With the container opening facing left, shake the container left to right over a distance of four to six inches. Shake the container about twice per second for 30 seconds.

5. Drain rinse water into spray tank as previously described.

6. Fill the empty container 1/4 full of clean water a second time.

7. Recap the container. With the opening of the container pointed towards the ground, shake the container as described before. Then drain the rinse water into the spray tank.

8. Finally, fill the empty container 1/4 full once more with clean water.

9. Recap the container. With the container in the normal, upright position, shake the container as described before.

10. Pour the rinse water into the spray tank. Carefully rinse and spray residue from the outside of the container.

Attachment 2

Acceptable vs. Unacceptable Containers!

**ACCEPTABLE**
- Thread and lip are clean.
- Stained but acceptable.
- Inside of container is dry.

**NOT ACCEPTABLE**
- Dried formulation on thread and lip.
- Stained and unacceptable.
- Liquid is present inside container.
To be acceptable for recycling, plastic crop protection products containers must be empty, clean, uncapped, and dry. Follow this checklist to make sure your containers are acceptable, then compare them with the above pictures.

- **EMPTY**: Plastic containers must be empty to be recycled.
- **CLEAN**: Pressure of triple-rinse the container as soon as it is emptied. Container must be cleaned or they will not be accepted into the recycling program.
- **INSPECT**: Immediately after rinsing the container, look inside and make sure that all the formulation has been rinsed out. Also inspect the outside of the container; particularly check that the pour spout, the spout threads, and the container wall surrounding the spout are free of formulation residues that flake, smear, or come off on a glove when touched. We cannot process containers that have dried formulation in or on them.
- **DISCARD CAP**: Caps are usually made of a different kind of plastic and cannot be recycled. Be sure to clean the cap at the time the container is rinsed. Never put a cap back on a cleaned container. Dispose of the cleaned caps as normal solid waste.
- **KEEP CONTAINERS DRY**: Cleaned containers must be kept out of the rain and away from the rain water. Store cleaned containers in a roofed building, an enclosed trailer, or in plastic bags.
- **LABELS**: Please Remove the instruction booklets.
- **STAINS**: Containers that originally held products known to stain plastic are acceptable for recycling if the plastic is stained but otherwise clean.
